### Ms. Kay to Computer Technology

So I have been informed that I am most likely going to be piloting a new "Computer Science" program next year in Middle School (and possibly up or down depending on the direction we take). My friend and I, the only 2 people in the tech department basically have the freedom to redesign the tech program however we want.... I am desperately seeking advice and guidance where to start with programming, etc. for middle school. We've already done Scratch, and they understand that... but what next?! ANY curriculum would be appreciated!! :)
