

**Me to Computer Technology**

Hello,

I am a student teacher. I need to prepare a Unit on Web design for Desktop Publishing Class in high school. I have few knowledge about Web design, so before designing my Unit I need to educate myself. This Unit will be taught in December, 2015. I need to educate myself and design my Unit in a short period of time.

I am looking for some suggestion on:

1. Can you recommend me some materials (books, articles on Web design) that I can use to enlarge my knowledge in Web design?
2. How to make an engaging Unit plan on Web design and relate in to students real lives situations (I am thinking about Project-Base learning)?
3. What are the most important elements of Web design?
4. What software is the best to use for high school students?
5. Do you know any Web design contents for beginners level?
6. Where I can look for examples of lesson plans on Web design for beginners?

I would appreciate any feedback,

Thank you,

Ruslana

Ruslana,

This is what I use with my students. Go to the website, contact a representative. Your school may be eligible to get funds based on how many students pass a certification exam.

Try to visit [w3schools.com](http://w3schools.com) It provides basic tutorials for web designing using HTML

**Mrs. Gillooly** said Nov 5, 2015

<http://www.weebly.com/> is an easy way to create basic websites

Start with what you want your students to accomplish first. Make an example yourself, then analyze what you needed to do to complete the final project. Then work backwards identifying each task you needed to do to get to that point. From there you will have a structure for what you need to teach. Then take each of these tasks that you have identified and bulk them up with content and you will have your lessons. By working backwards you will insure that everything you teach has a purpose and will help the students achieve the desired results.

Thank you to everyone who responded. All the answers were very helpful to me. I really recommend everyone who is teaching Web design the web site <http://www.ictcertified.com>. My host teacher doesn't want me to deal with students certifications, but this web-site was very useful anyway. It has learning objectives and essential questions as well as the detailed course plan and 2 lesson plans available for public use. It is a great resource. Thanks a lot Ms. Baque for sharing it.
